

# What we've built so far

The goal: a customer sends a payment in rand or in USDC, Raayl converts it where needed, moves it over Circle's Arc network, and pays the receiver into a bank account or a USDC wallet. This sheet shows the parts of that system that are built today and how they connect to Raayl's existing systems.

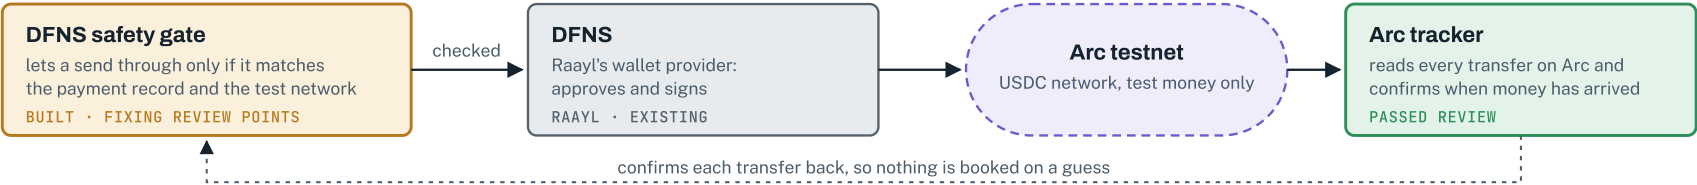

|            |                       |
|------------|-----------------------|
| AS OF      | 7 Oct 2026            |
| NETWORK    | Arc testnet only      |
| REAL MONEY | None yet              |
| MAINNET    | Locked until sign-off |

Done and checked Built, being reviewed or fixed Raayl's existing system (we connect to it) Arc network (outside party)

CONNECTING TO RAAYL

UNDERNEATH EVERYTHING

Coloured boxes with a status tag are ours; grey boxes are Raayl's existing systems that we connect to without changing them.

## What's built

**1** part passed independent review    **3** parts built, fixing review points

✓ foundations and design done

| PART                    | WHAT IT DOES                                                                                               | STATUS |
|-------------------------|------------------------------------------------------------------------------------------------------------|--------|
| Foundations and design  | Safety rules, mainnet lock, automated checks, signed releases, exact money maths, and the agreed blueprint | Done   |
| Arc tracker             | Sees every USDC transfer on Arc and confirms it arrived                                                    | Passed |
| DFNS safety gate        | Lets DFNS sign only payments that match our records                                                        | Fixing |
| Raayl connection points | Plugs into Raayl's ledger, wallets and payment records                                                     | Fixing |
| Quote                   | Works out the price and what the receiver gets                                                             | Fixing |

Every part is checked by an independent reviewer before it counts as done. "Fixing" means the reviewer found points to correct and the fixes are under way.

## Waiting on other people

- **Khumo & Sherwin** Set up the Arc testnet DFNS account (they've offered). This lets us run a real test payment on testnet.
- **Khumo** Answer the 12 follow-up questions (amount format, where fees are posted, and so on).
- **Business** Choose a bank payout partner. Until then, bank payouts use a stand-in.
- **Legal** An opinion on cross-border payments. Until then, they stay switched off.
- **Named sign-offs** Required before anything touches real money on Arc mainnet.
